

Future Living Survey 2026

Complete journey analysis and pathway breakdown

<i>Prepared for</i>	betterhomes Marketing
<i>Survey URL</i>	<code>future-living-survey-2026.vercel.app</code>
<i>Generated</i>	09 June 2026
<i>Pathways enumerated</i>	8 tenant · 16 owner

Executive Summary

The Future Living Survey 2026 contains **89 question blocks** distributed across seven sections. Respondents do not see every question — the survey forks at **Q13 (current living situation)** into a tenant path and an owner path, and within each branch a further **14 conditional follow-ups** are revealed based on prior answers.

After enumeration, there are **8 distinct tenant pathways** (varying by length of stay, intent to buy, and whether the respondent has previously transacted with betterhomes) and **16 distinct owner pathways** (varying by financing type, number of properties owned, management approach, and intention to buy again). Pathway-level question counts and time estimates are detailed in the breakdown that follows.

Key findings

- **Range of journey length:** 46 questions (shortest tenant path) to **73 questions** (longest owner path — mortgage holder with 4+ properties triggering every conditional).
- **Tenant journeys:** 46–54 questions, ~6–12 minutes typical.
- **Owner journeys:** 55–63 questions, ~7–14 minutes typical. Multi-property owners ($Q34 \geq 2$) generate dynamic per-property fields, so true totals scale with the count entered.
- **Conditional rules:** 14 branching rules in total — these expand the journey by 1 to 8 additional questions depending on the answer combinations.
- **Branch point:** Q13 (renter vs owner) is the only path-splitting question. Sections s1, s4, s5, s6, s7 are shared; s2 is tenant-only, s3 is owner-only.

At-a-glance

89	24	14	73
TOTAL QUESTION BLOCKS	DISTINCT PATHWAYS	CONDITIONAL RULES	MAX QUESTIONS IN ONE JOURNEY

Implications for completion rate

The 46–73 question range puts the survey in the "considered effort" tier — long enough to gather rich data but short enough that motivated respondents will finish in one sitting on mobile. The incentive (a 2-night stay at Atlantis The Royal) is positioned to offset this. Drop-off risk concentrates in two places: (1) the renter rank lists (Q23 / Q24) — now reduced from "rank all 10–12" to "select your 5 most important" with the recent fix; and (2) the owner multi-property block when 4+ properties are entered, which generates 8+ dynamic input fields. Both have been addressed in the current build.

The branching architecture

The survey is organised into seven sections, traversed in different orders depending on whether the respondent is a renter or an owner. The single branch point is Q13 (current living situation): selecting "Short-term rental" or "Long-term rental" routes the respondent through s2 (Renting); selecting "Own with mortgage" or "Own outright" routes them through s3 (Owning). Section sequence:

TENANT	s1 Your Profile	s2 Renting	s4 Market Perception	s5 Regional Sentiment	s6 Brokers & AI	s7 betterhomes & contact
OWNER	s1 Your Profile	s3 Owning	s4 Market Perception	s5 Regional Sentiment	s6 Brokers & AI	s7 betterhomes & contact

Section anatomy

Section	Title	Path	Base Qs	Conditional Qs	Total Qs
s1	Your Profile	Shared	15	2	17
s2	Renting	Tenant only	11	6	17
s3	Owning	Owner only	17	14	31
s4	Market Perception	Shared	4	2	6
s5	Regional Sentiment	Shared	5	0	5
s6	Brokers & AI	Shared	8	2	10
s7	betterhomes & contact	Shared	3	0	3

Tenant pathways

Three binary dimensions shape the tenant journey: **length of stay** (does the respondent intend to be in Dubai for less than 3 years?), **intent to buy** (are they considering a Dubai property purchase?), and **betterhomes history** (have they transacted with betterhomes before?). This yields **8 distinct tenant pathways**.

Pathway summary

#	Stay length	Intend to buy	BH history	Total Q	Rank Qs	Time
T1	Short (<3y)	Yes	Yes	54	2	8–12 min
T2	Short (<3y)	Yes	No	52	2	7–11 min
T3	Short (<3y)	No	Yes	49	2	7–11 min
T4	Short (<3y)	No	No	47	2	7–10 min
T5	Long (>3y)	Yes	Yes	53	2	7–11 min
T6	Long (>3y)	Yes	No	51	2	7–11 min
T7	Long (>3y)	No	Yes	48	2	7–10 min
T8	Long (>3y)	No	No	46	2	6–10 min

What each pathway looks like

T1 · Short (<3y) · Intend to buy = Yes · BH history = Yes → 54 Qs · 8–12 min

New arrival or short-stay resident who plans to buy and has used betterhomes before. The conversion-ready segment — drives the most data: stay rationale, purchase intent, NPS, and improvement suggestions. **Longest tenant journey.**

T2 · Short (<3y) · Intend to buy = Yes · BH history = No → 52 Qs · 7–11 min

New arrival or short-stay resident considering buying, but new to betterhomes. Useful for brand awareness measurement and new-customer acquisition signal.

T3 · Short (<3y) · Intend to buy = No · BH history = Yes → 49 Qs · 7–11 min

Short-stay renter, not buying, but a betterhomes customer. Useful for service-quality and NPS feedback.

T4 · Short (<3y) · Intend to buy = No · BH history = No → 47 Qs · 7–10 min

Short-stay renter, not buying, never used betterhomes. Lightest segment — primarily demographic and market-sentiment data.

T5 · Long (>3y) · Intend to buy = Yes · BH history = Yes → 53 Qs · 7–11 min

Established renter (3+ years), considering buying, betterhomes customer. The "warm lead" segment — high conversion potential.

T6 · Long (>3y) · Intend to buy = Yes · BH history = No → 51 Qs · 7–11 min

Established renter considering buying but new to betterhomes — fresh prospect.

T7 · Long (>3y) · Intend to buy = No · BH history = Yes → 48 Qs · 7–10 min

Established renter, not buying now, betterhomes customer. Loyalty / retention segment.

T8 · Long (>3y) · Intend to buy = No · BH history = No → 46 Qs · 6–10 min

Established renter, not buying, not a customer. **Shortest tenant journey.** Pure market-research signal.

Owner pathways

Four binary dimensions shape the owner journey: **financing** (mortgage vs outright), **number of properties** (one vs two-or-more), **management approach** (third-party managed vs self-managed), and **intent to buy again** in Dubai. This yields **16 distinct owner pathways**. Multi-property owners ($Q34 \geq 2$) additionally generate dynamic per-property fields (bedrooms + community), so the true total scales with the property count entered.

Pathway summary

#	Financing	Props	Mgmt	Buy again	Total Q	Rank Qs	Time
O1	Outright	1	Managed	Yes	61	2	8–12 min
O2	Outright	1	Managed	No	57	2	8–12 min
O3	Outright	1	Self	Yes	60	2	8–12 min
O4	Outright	1	Self	No	56	2	8–12 min
O5	Outright	2+	Managed	Yes	60	2	8–13 min
O6	Outright	2+	Managed	No	56	2	8–12 min
O7	Outright	2+	Self	Yes	59	2	8–12 min
O8	Outright	2+	Self	No	55	2	8–12 min
O9	Mortgage	1	Managed	Yes	63	2	9–13 min
O10	Mortgage	1	Managed	No	59	2	8–12 min
O11	Mortgage	1	Self	Yes	62	2	8–13 min
O12	Mortgage	1	Self	No	58	2	8–12 min
O13	Mortgage	2+	Managed	Yes	62	2	9–13 min
O14	Mortgage	2+	Managed	No	58	2	8–13 min
O15	Mortgage	2+	Self	Yes	61	2	8–13 min
O16	Mortgage	2+	Self	No	57	2	8–12 min

What each owner pathway looks like

O1 · Outright · Props 1 · Managed · Buy again = Yes → 61 Qs · 8–12 min

Outright owner of a single property, third-party managed, not looking to buy again. Stable, low-engagement segment — useful for portfolio benchmarking.

O2 · Outright · Props 1 · Managed · Buy again = No → 57 Qs · 8–12 min

Outright owner of a single property, self-managed, not buying again. DIY landlord baseline.

O3 · Outright · Props 1 · Self · Buy again = Yes → 60 Qs · 8–12 min

Outright owner of multiple properties, professionally managed, not buying again — high-net-worth landlord segment.

O4 · Outright · Props 1 · Self · Buy again = No → 56 Qs · 8–12 min

Outright owner of multiple properties, self-managed, not buying again — multi-property DIY operator.

O5 · Outright · Props 2+ · Managed · Buy again = Yes → 60 Qs · 8–13 min

Outright owner of a single property, professionally managed, buying again. Active re-investor signal.

O6 · Outright · Props 2+ · Managed · Buy again = No → 56 Qs · 8–12 min

Outright owner of a single property, self-managed, buying again — confident DIY investor adding to portfolio.

O7 · Outright · Props 2+ · Self · Buy again = Yes → 59 Qs · 8–12 min

Multi-property outright owner with professional management, planning another purchase. Premier prospect segment.

O8 · Outright · Props 2+ · Self · Buy again = No → 55 Qs · 8–12 min

Multi-property outright owner, self-managed, buying again — high-engagement investor.

O9 · Mortgage · Props 1 · Managed · Buy again = Yes → 63 Qs · 9–13 min

Mortgage holder, single property, professionally managed, not buying again — mainstream owner-occupier.

O10 · Mortgage · Props 1 · Managed · Buy again = No → 59 Qs · 8–12 min

Mortgage holder, single property, self-managed, not buying again. Typical first-time buyer profile.

O11 · Mortgage · Props 1 · Self · Buy again = Yes → 62 Qs · 8–13 min

Mortgage holder, multiple properties, professionally managed, not buying again. Established mortgage-leveraged portfolio.

O12 · Mortgage · Props 1 · Self · Buy again = No → 58 Qs · 8–12 min

Mortgage holder, multiple properties, self-managed, not buying again — DIY landlord with leverage.

O13 · Mortgage · Props 2+ · Managed · Buy again = Yes → 62 Qs · 9–13 min

Mortgage holder, single property, professionally managed, buying again. Upgrading or expanding — strong conversion target.

O14 · Mortgage · Props 2+ · Managed · Buy again = No → 58 Qs · 8–13 min

Mortgage holder, single property, self-managed, buying again — second-home or investment prospect.

O15 · Mortgage · Props 2+ · Self · Buy again = Yes → 61 Qs · 8–13 min

Mortgage holder, multi-property, professionally managed, expanding. High lifetime-value segment.

O16 · Mortgage · Props 2+ · Self · Buy again = No → 57 Qs · 8–12 min

Mortgage holder, multi-property, self-managed, buying again. **Longest owner journey — most comprehensive data capture.**

Spine modifiers

These conditional follow-ups are not used to define separate pathways because they are low-frequency and only add a single question each. They stack onto any base pathway and should be added to the totals above when modelling worst-case journey length.

Modifier	Effect	Applies to
Remote work = Yes (Q14)	+1 Q · ~30s	Tenant only
Blockchain aware (Q23)	+1 Q · ~30s	Tenant only
Need market guidance (Q53)	+1 Q · ~25s	Both
Property value ≥ AED 200k (Q32)	+1 Q · ~15s	Owner only

Conditional logic reference

Every conditional branch in the survey, ordered by the section in which it resides:

Cond ID	Section Trigger		What it reveals
bq10_follow	s1	Q10 ∈ {Less than 1 year, 1–3 years}	Q11 free-text on what would extend stay
bq14a	s2	Q14 = Yes (remote work)	Q14a free text on housing-pref impact
bq23a	s2	Q23 ∈ {Yes invested, Yes aware}	Q23a follow-up on blockchain platform attraction
bq24	s2	Q22 = Yes (intend to buy)	Q24 multi-select on purchase motivations
bq32_val	s3	Q32 (property value) ≥ AED 200,000	Free valuation prompt with consent flag
bq33	s3	Q11 = Own with mortgage	Q33 EMI block + Q33a mortgage tenure
bq34s	s3	Q34 = 1 (single property owned)	Q34a–d single-property detail block
bq34d	s3	Q34 = 1 AND Q11 ≠ Own outright	Q34d usage detail (own use / let / mix)
bq35m	s3	Q34 ∈ {2, 3, 4+}	Q35 dynamic multi-property table (bedrooms + community p
bq40a	s3	Q40 ∈ {Yes (let-only), Yes (full mgmt)}	Q40a manager-requirements multi-select
bq44	s3	Q44 = Yes (will buy again)	Q45–Q49a future-purchase block (8 questions inc. rank lists
bq54b	s4	Q53 = Need guidance	Q54b content-preference multi-select
bq68	s6	Q67 = Yes (transacted with bh)	Q68 NPS scale 1–10
bq70	s6	Q67 = Yes	Q70 improvement-suggestions multi-select

Time analysis

Average completion time is driven primarily by free-text fields (~22–30 s each) and multi-select rank lists (~45 s each). Radio and dropdown questions account for the bulk of the question count but the minority of the time.

Type	Count	Time per Q	Sub-total
Single-choice (radio)	51	~6 s	5 m 6 s
Multi-choice (checkbox)	16	~12 s	3 m 12 s
Dropdown	8	~10 s	1 m 20 s
Single-line text / number	7	~22 s	2 m 34 s
Multi-select max 5 (rank list)	4	~45 s	3 m 0 s
Paragraph free text	1	~30 s	0 m 30 s
Other / hidden	1	~8 s	0 m 8 s
1–10 scale	1	~5 s	0 m 5 s

Observations & recommendations

Strengths

- **Path-aware data capture.** The new `_answers` array stores every visible question with the respondent's actual question number, so reports show the journey as the respondent experienced it.
- **Tight branching.** 14 conditional rules — meaningful enough to personalise, simple enough that no respondent encounters dead ends or paradoxes.
- **Owner segment depth.** 16 owner pathways collect enough variation to power portfolio-level analysis (mortgage exposure × property count × management mix × buy-again intent).

Drop-off risk points to watch

- **Q23 / Q24 / Q45e / Q45f** — multi-select rank lists. Resolved by capping selection at 5 with a checkmark UI (no more "rank all 10–12").
- **Q35 multi-property block (owners with 4+ properties)** — dynamic table generates 8+ extra fields. Worth monitoring drop-off here in early submissions.
- **Long free-text fields (Q11, Q14a)** — optional but still encountered. Already optional and clearly labelled "Optional — share a quick thought".

Suggested measurements once data starts flowing

- Median completion time by pathway ID to validate the estimates above.
 - Drop-off rate per section — does a section see disproportionately more abandonment?
 - Rank-list completion: percentage of respondents who select exactly 5 vs fewer.
 - Conditional fire-rate: how often does each of the 14 rules actually trigger?
-
